

Leveraging Interoperable Identification for openBIM

BuildingSMART Xchange 2024

Bonnie Ryan – General Manager Industry Engagement 4 July 2024

GS1 is a global data standards and services organisation

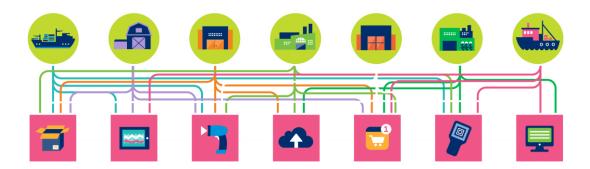

Traceability in a nutshell

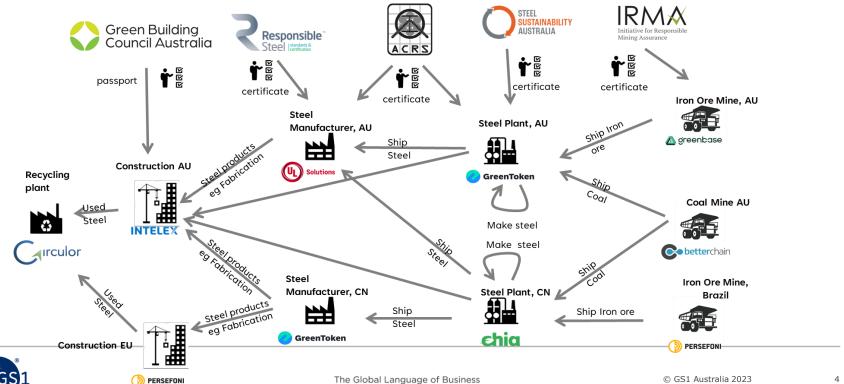

The ability to trace the history, application or location of an object [ISO 9001:2015]

- Origin of materials and parts
- Processing history
- Distribution & location of the product/service after delivery

The real world is complex

Interoperable technology eco-system

For traceability to be effective, systems MUST be interoperable

Traceability solutions based upon proprietary identification methods cannot deliver interoperability between ecosystems.

Product journey throughout the E2E Lifecycle

In the age of ESG
and a more
informed client
base, the "End to
End" journey starts
with
"DIGITAL PRODUCT
IDENTIFICATION"

GS1 standards give products their unique identity

Identification + Data = Identity

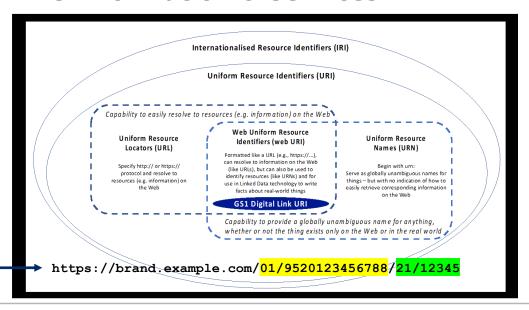

<u>Digital Link standard</u>: URI Syntax

Enabling consistent representation of GS1 ID keys with web addresses to link to online information & services

GS1 Digital Link extends the power & flexibility of GS1 identifiers in the real world by making them part of the web – a gateway to information about the product/material/object

Valid DL URI for **GTIN** '9520123456788' combined with **Serial Number** '12345'

What can be achieved via the global language of Business?

GS1 global data standards combined with GS1 Digital Link enables...

"Trusted Product Data Flows"

User-defined Access to a "GOLDEN THREAD" of "Manufacturer VERIFIED PRODUCT INFORMATION" out in the field, with a simple scan of globally unique tags

Providing end-users with "Corralled" trusted product data flows is a critical requirement in the era of "large language models" and "Generative AI."

Digital Link – Use Cases

Product related information can be....

- IDENTIFIED
- CAPTURED
- SHARED

along the entire product lifecycle through a single code, relating to an intelligent Digital Identity in the cloud.

Single use QR codes don't deliver optimal outcomes

If this in-store application of extra QR codes happened in your local supermarket today...it would be a sub-optimal use of resources, and yet...

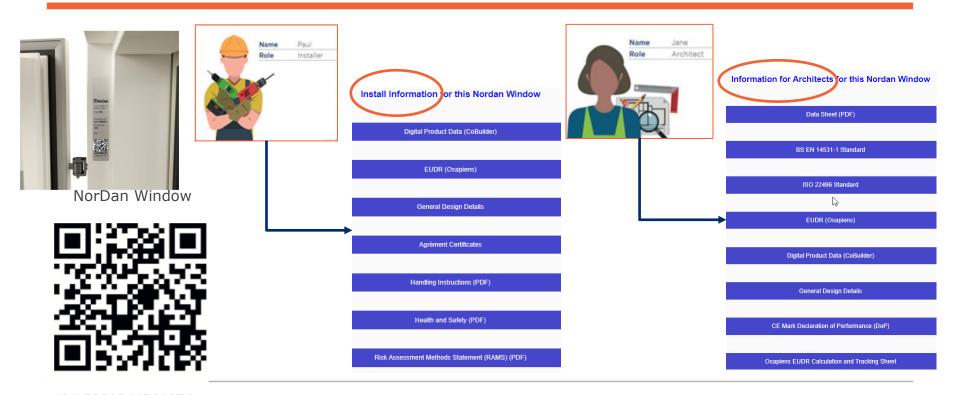

Three different product/asset knowledge trails and three times the work plus zero chance of a truly E2E Golden Thread"

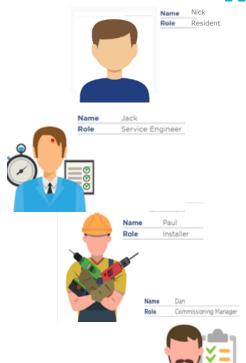

User specific information from a single scan

https://gs1ie.app/gb

Australian Table Grapes

Scan the QR code to discover the power of product verification
